

Day 10

Question 1

Write a program to:

- Take user input for 10 accounts holders: account number, name, balance and account opened date
- Create a class to store account holder in a class (POJO)
- Create a method to save the information in a file "bank.txt", separate the data using semicolon (;)
- Now, read the file "bank.txt"
- Create a method to check if there is duplicate account (account number must be unique) and remove it if there are any duplicate data
- Now, update the file with the updated account detail i.e. unique account number account only
