

Day 36

Minor Project: Training Class Management System

- There is a requirement where we need to manage the training classes in an institute. It includes both admin side and user/customer side.
- Admin Panel
 - The user should be able to create, update, delete the training class:
 - Training class includes fields like id, user_id, subject, description, time, duration, cost, status, trainer, etc.
 - Where *user_id* should be the id of logged in user
 - While creating and updating validate all the data in both client side and server side.
 - User can view all the training classes in the data table
 - User can click on edit and delete buttons from the data table
 - Ask user for confirmation for the delete action
 - Admin panel should be opened from the link: **/admin/panel**
- User Panel
 - User can view the home page from the link **/home** that shows some information about the institute like about, pictures, partners, trainers, etc.
 - User can view all the ongoing training class from the link **/classes/ongoing** which should list all the active online classes.
